

CamStreamer & Flightradar24 YouTube Live Streaming Project

We power it. Flightradar24 amplifies it. You earn.

Transform your airport view into a recurring revenue

How does it work?

You invest in the camera setup.

This setup consists of an Axis PTZ camera with accessories and internet connectivity at the place of installation.

We provide an architecture design, a component list, and software for free with this project.

PlaneTracker App runs on a camera connected to CamStreamer Cloud and automatically tracks aircraft takeoffs or landings.

Flightradar24 makes the stream visible.

The stream is delivered to Flightradar24's YouTube channel, which has tens of millions of views and a subscriber base in the hundreds of thousands.

You get an interesting share of net YouTube revenue.

The profit comes from your stream views, all with a transparent monthly report based on a contract with CamStreamer.

LIVE FROM LAS VEGAS

Atlanta	Las Vegas
154 km	2082 ft

Watch the **Las Vegas camera** with PlaneTracker App on board while tracking aircraft automatically 24/7.

Is your spot a good fit?

Here are the necessary conditions for participation in the project:

Got a place with a clear view of the active runway

Can host an outdoor PTZ Axis camera and basic infrastructure (power supply, connectivity)

Are interested in a long-term, contract-based, revenue-sharing partnership

What will onboarding look like?

①

Evaluate your spot and camera placement.

②

Install according to the provided architecture & components list.

③

Connect the camera to CamStreamer Cloud and test the stream.

④

Finalize the contract, go live on Flightradar24's YouTube channel, set cross-promotion and monthly reporting.
