 CAMSTREAMER

CAMOVERLAY APP

How does CamOverlay App work?

CamOverlay App is **smart application running inside** an Axis network camera.. It allows you to add weather info, sport results or your own dynamic and custom graphic overlay (.JPG, .PNG, .GIF) to your live stream.

CamOverlay App allows you to **add graphic overlays** directly on an Axis IP camera. Set up is easy and both options, presets and custom graphics services, are available.

With the help of **CamStreamer App** you can easily send live video feed from the camera directly to a streaming platform of your choice.

Everything is controlled through a clear **user interface**, which is available both in the browser and with cloud remote access in the mobile app. Get inspired by the live streams at <https://camstreamer.com/live>.
