

Mix camera views, videoclips & audio

SWITCH UP TO 5 CAMERAS

ADD VIDEOCLIPS

ADD AUDIOTARCKS

MIX IT INTO ONE STREAM

 CAMSTREAMER

CAMSWITCHER APP

How does CamSwitcher App work?

CamSwitcher App is **smart application running inside** an Axis network camera without any extra hardware required. The app fetches RTSP video streams from the connected cameras and can switch among up to five AXIS network cameras and video clips saved on the camera's SD card.

Choose master audio and generate a single output video stream in real-time. Switching can be **manual, automatic** via predefined playlists, or **triggered via API commands**.

With the help of **CamStreamer App** you can easily send live video feed from the camera directly to a streaming platform of your choice.

Everything is controlled through a clear **user interface**, which is available both in the browser and with cloud remote access in the mobile app. This makes it possible to control the streaming from anywhere.
