USE CASE - instructions

How to set-up Windy.com in the CamStreamer App

We have added the new Windy service to the CamStreamer App – it's another great way to raise **awareness** of your live stream, as the image from your camera will be placed on the **interactive map** that windy.com app users can use to connect to the displayed **weather data** with a real image from the location of your online stream.

The CamStreamer App doesn't broadcast a live stream, but **captures an image** every 15 minutes that is sent to windy.com. People can then play a **time-lapse video** from the captured images.

The **advantage** is that you can add this **complimentary service** to your existing live stream. The CamStreamer App version 3.X can run **multiple services simultaneously** (e.g. streaming to YouTube + sending images to windy.com). You can also add the name of the camera and **link to your website** or live stream directly in the CamStreamer App.

By doing so, you can heighten awareness of your live stream. This is an **excellent extension** of the camera's utility for other groups of people and cameras in nature parks, reservations, cities, etc.

What is Windy.com?

A web service that connects thousands of various weather data sources (depicting weather strength, rainfall intensity, lightning, etc.). People from around the world connect their web cameras to the windy.com application, allowing its interactive map to stream current images from specific sites.
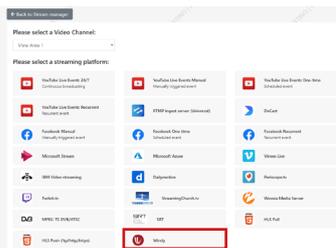

What do you need?

- An AXIS camera (check compatibility here)
- The CamStreamer App
- An account at www.windy.com

Tip: Get a **free 30-day license** for our apps on www.camstreamer.com.

Steps to run it:

1. Install the **CamStreamer App** on your camera (if not already installed) and press the **Add new service** button and select **Windy**.

How to set-up Windy.com in the CamStreamer App

2. Using the **Login button**, log in to your account that you've created at www.windy.com, or create an account directly in the **CamStreamer App's log-in window**.

3. Then fill in the **additional required information** in the CamStreamer App, i.e. the **name** of your camera and the **address** where it's located.

4. By clicking on the **(OPEN) link**, a preview of your camera will appear within **one hour** of setting up and sending the first image to **windy.com**.

Done! Now people from all over the world can see images from your location.
